

**Limelight multi event lighting
installation, Burwood Park,
Sydney, 2017**

The Burwood Park lighting system is a completely customised lighting design which incorporates spring tensioned adjustable tree brackets capable of supporting 5 x LED light fixtures in an up/down configuration.

The installation comprised of 17 mature age trees, spanning 200 metres with a total of 85 LED light fixtures, resulting in an outstanding burst of colour light display.

Special care was taken to ensure the powder coated brackets could be mounted to the mature age palm trees without causing damage to the trunks and to allow for future growth.

Lighting control was incorporated into the weather proof enclosures and mounted to existing light poles.

The wireless, programmable control system is capable of holding 8 preset scenes of your choice, ie Christmas, Halloween, Valentines, Rainbow Scroll, Warm white etc.

The entire installation was carried out in accordance with Australian Standards, with much consideration given towards achieving a low impact retrofit result.

The project has been well received by Council and the community alike.
