

Limelight Australia in association with Canada Bay Council proudly introduces the illumination of Rider Boulevard, Rhodes.

Spanning over 200 metres along the Canada Bay shoreline the installation saturates 19 mature age weeping fig trees in a wash of colour.

The ambient lighting system comprises of 57 ground mounted Opto 21 LED luminaries creating an unparalleled level of concentrated colour.

The multi event lighting system is capable of holding 8 customised preset “scenes” to celebrate the festivities of your choice such as Christmas, New Year, Vivid, Local events and Cultural events. It is an effective way of getting the most out of one installation.

Currently it is set on a rainbow effect which cross fades between colours over a 3 and a half minute duration.

The system can be controlled via an on site control station or through an infra red controller making it versatile and user friendly.

The project has been well received, and aside from the obvious aesthetic appeal, a further benefit is that the installation offers the parkland fantastic evening illumination, providing the community with a greater sense of security.

We would be pleased to conduct a guided inspection of the installation or offer a small local demonstration.

If you have been thinking about installing or upgrading a public lighting system and would be interested in exploring this or other solutions please feel free to contact us for further information.
